

WeighMate

**“If you can measure it,
you can manage it.”**

“This comprehensive weighing system is an ‘Australian First’ offering a high level of reliability for both side and rear-loading waste trucks.”

City of Ryde Council

> WEIGHMATE

Certified, Dynamic and Static Weighing systems for front lift, side lift and rear lift vehicles. WeighMate is the only dynamic weighing system manufactured in Australia to have achieved certification by the National Measurement Institute of Australia.

WeighMate is unique as it is a direct weighing system (not an indirect weighing system) with the weighing device in direct contact to the bin being weighed.

This offers major accuracy and reliability advantages over indirect systems. The entire dynamic weighing system is encapsulated within the lifting mechanism.

Each individual bin is dynamically weighed to deliver a ‘net weight’ for the waste in the bin as well as displaying a ‘real-time’ cumulative weight of waste lifted in the truck for driver information regarding compaction criteria and tip timing.

Again, this is automatically collected and differentiated for data of either two smaller bins or one larger bin depending on which is the case.

> SYSTEM FEATURES

- Individual bin weight
- Static and dynamic weighing of all types of waste collection trucks;
- On-the-Body weighing systems
- Certified or Non-Certified weighing
- Automatic use and ease of operation – No driver intervention
- Robust & reliable
- Bin counter

> SYSTEM BENEFITS

- Total weight of truck for road and travel safety
- Identify rate payers who produce excessive waste for educational programs
- Monitor the true cost of waste collection in kilograms
- Identify presentation rates with the bin counter
- Implementation of user-pays systems
