

# MapMate

**“If you can measure it,  
you can manage it.”**

*“This technology has afforded us a level of detailed management information that we only ever dreamed of having available.”*

## > MAPMATE

Web Based Mapping for the Location & Positioning of vehicles of all types and uses. The ManageMate tracking system is able to track, report and measure vehicle usage within definable parameters including time and geographical boundaries.

The ability to be able to monitor and report exceptionally on a commercial fleet provides companies with the opportunity of more effectively managing the fleet and thus reducing operational costs.

Allows for ‘real-time’ web based mapping of the region of interest depicting the location of the truck, the bin lifted and all associated operations to be generated from this information.

GPS allows specific location data to be correlated with all data provided by the on-truck Data Generation system. This provides for direct, independent and reliable location data for the truck and bins lifted.

## > SYSTEM FEATURES

- Depiction of the Councils boundaries and collection zones
- Viewing of location of the truck and/or bins collected
- ‘Find’ engine filtering according to Location, Accounts, Address and/or Bin Geo-fencing Filter for viewing current or historical maps and mapping events
- Ability to print and/or download map picture files
- Display truck direction and speed
- Route optimisation
- Add Google layer or LPI base layer so we can do vehicle tracking over larger areas
- Display bins not yet collected
- Display video events and play video
- Display out of position bins

## > SYSTEM BENEFITS

- Reduce the cost and time for dispute resolution with either the waste collector or the rate payer
- Improved fleet operation efficiencies through route management and optimisation
- Reduce the numbers and cost of replacing lost / stolen bin
- Remote and ‘real-time’ management
