

ReportMate

“If you can measure it,
you can manage it.”

home reports mapping administration

“ReportMate allowed us to set triggers that generated exception reports identifying incorrect usage and location. This valuable information had a positive impact on driver behaviour.”

> REPORTMATE

Standard or Unique Data Reporting systems are core components of the ManageMate suite of products. The flexibility of the ReportMate product means that it can be customised to suit individual organisational requirements. ReportMate turns a mass of data into key management-friendly information and knowledge. The system is designed with a multitude of intuitive query tags as well as pre-defined automated reporting.

Subsequently, all of this Report data is available by the web user for download via an appropriate 'csv' file of the basic reports for integration into existing IT systems for further analysis and reporting. Additional 'automatic' reports can be designed and generated and these are dependent upon specific needs and requirements.

> SYSTEM FEATURES

Delivers eight basic 'real-time', 'on-line' reports of the information generated and stored:

- **Bins Scanned** – reports on bins lifted that are allocated in the database
- **Bins Lifted** – reports all bins lifted irrespective of being in the database
- **Bins Not Scanned** – reports on those bins in the database that were supposed to be lifted and were not
- **Bins Out of Position** – reports on bins that were lifted from a position greater than the accepted norm (such a distance to be set within the WCTS)

- **Flagged Events** – reports on bins that were tagged by the drivers for particular management events including the relevant video file
- **Summary by Commercial Account** - reports specifically on the number of bins lifted for specifically determined Commercial Accounts
- **Summary by Truck** – a summary report on bins lifted by all trucks
- **Summary Graph by Truck** – the Summary by Truck report graphically

The basic Reporting in the WCTS is an 'on-line' inquiry system whereby the User can directly investigate the 'real-time' data over the 'web'. Each of the 'on-line' inquiries can be further tailored into a more specific report according to selected parameter filters which include: Start and End Dates, Collection Zone, Truck, Bin Type, Account Type, Billing Number, Bin Serial Number, Street Address, Suburb and Postcode.

> SYSTEM BENEFITS

- Pay-Per-Lift ability between the Council and the waste collection company
- User-pays ability for commercial accounts / bins
- Fixed & Automated reporting against KPI's for the Council and waste collector
- Dynamic & flexible reporting against KPI's for the council and waste collector
- Reduce the cost and time of dispute resolution
- Remote Management
- Access and assess waste producer and waste collection trends
